

Singapore Environmental Diagnostics Laboratory Offers Indoor Air Quality Testing Solutions

Indoor Air Quality (IAQ) is of concern to all of us, since we spend a substantial amount of our time indoors, be it at the office, our home or other commercial buildings and establishments.

Environmental Consultants professionals can identify the causes of poor Indoor air quality – even when the problem seems vague or unrelated to visible causes.

Environmental consultants are trained to gather and interpret data from various systems operating in a building in order to diagnose the dozens of integrated systems contributing to the overall health of the building.

IAQ is Singapore's leading specialist in the field of Indoor Environmental Quality ("IEQ"). Our Mission is to provide our clients with practical, cost-effective solutions to Indoor Air Quality problems, and help them achieve sustainable and safer indoor working and living environments.

Why IAQ?

IAQ has a vast experience of indoor environment testing, and providing customised solutions specific for the problems encountered. This has earned us a reputation for delivering Solutions for Healthier Environments – because IAQ always attacks the root cause of a problem, not just its symptoms.

We are a multi-disciplinary, environmental testing & consultancy provider. Our experience & knowledge of environmental solutions is rigorously reinforced by the application of local & international standards.
